

WHAT IS CLAIMED IS:

1. A portable communication device including a camera lens module, comprising:
 - 5 a main housing;
 - a pair of connecting side arms extended lengthwise from both side corners of the main housing, facing each other; and
 - a cylindrical housing including a speaker formed on a circular upper surface thereof and the camera lens module formed on a lower surface thereof,
 - 10 wherein the cylindrical housing is rotatably connected to the pair connecting side arms and a predetermined portion of the cylindrical housing is accommodated between the connecting side arms, so that the cylindrical housing is rotatable around a hinge axis.
- 15 2. The portable communication device of claim 1, wherein the main housing comprises, on an upper surface thereof, a display, a plurality of keys arranged below the display, and a microphone positioned below the keys.
3. The portable communication device of claim 1, wherein the
20 cylindrical housing is rotatably connected to the connecting side arms so that the cylindrical housing can rotate 180°.
4. The portable communication device of claim 1, wherein the camera lens module is detachable so that the camera lens module can be replaced
25 by another camera lens module.
5. The portable communication device of claim 1, wherein the main housing is bar-shaped.
